

Upgrading for better performance and conditions

Customer case - January 2020

Replacement of old Piston Pump

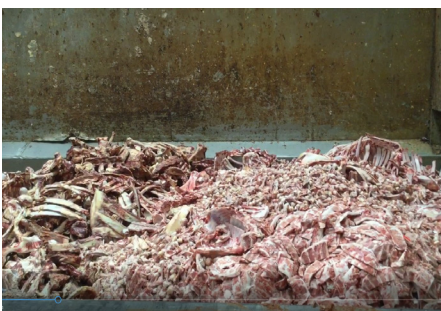

Heinrich Nagel GmbH contacted the JS Proputec Sales Team in relation to a specific challenge they had moving by-products from an unloading area to a processing line in their factory.

The Challenge

By-products were to be lifted more than 8 meters from under the crusher and 40 meters along the ceiling to the holding bin.

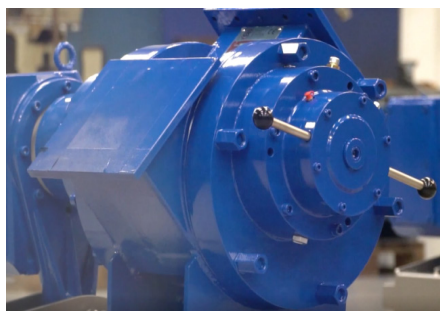

FINDING THE OPTIMAL SOLUTION

The JS project team worked in close cooperation with Heinrich Nagel GmbH to find the optimal solution. Due to its reduced power consumption and maintenance, the JS Lamella pump was chosen.

Thereby, it was possible to realise a more environmentally friendly production with lower operation costs - all without losing efficiency.

SIGNIFICANTLY BETTER PERFORMANCE

The JS solution also provided a more continuous flow, lower pressure and less wear on the pipeline. The JS Lamella Pump is significantly less noisy and takes up little space compared to the piston pump.

It operates within closed environments that prevents any smells - all-together creating a healthier working environment.
